Tesmec develops technologies that make strategic infrastructures smarter, safer and more resilient.

The Group operates in the markets driving the transformation of global infrastructure, including electrification, grid modernization, renewable energy integration, asset digitalization and critical infrastructure security. In this context, Tesmec develops technologies, digital solutions and services supporting the entire lifecycle of energy, railway, telecommunications and natural resources infrastructure.
Through a proprietary platform of engineering expertise, automation, electronics, software and data intelligence, Tesmec supports utilities, contractors, infrastructure operators and industrial customers in the development, management and optimization of networks, substations and strategic assets.
The combination of a technology excellence center and an international network of local hubs in key markets enables the Group to combine innovation, customer proximity and execution capabilities.
Founded in Italy in 1951 and headquartered in Grassobbio (Bergamo), Tesmec is listed on the Euronext STAR Milan market and employs approximately 900 people worldwide. Through its Energy Stringing, Energy Automation, Railway and Trencher business areas, the Group applies integrated technologies and expertise across different infrastructure sectors, contributing to the development and modernization of strategic infrastructure worldwide.
