Padua, March 21, 2023 - The Board of Directors of SIT S.p.A., listed on the Euronext Milan segment of the Italian Stock Exchange, in a meeting today presided over by Federico de' Stefani, the Chairperson and Chief Executive Officer, approved the 2022 consolidated results.

Federico de Stefani, Chairperson and Chief Executive Officer of SIT stated:

"We are today very pleased to approve the better-than-expected results for 2022, a year which featured major geopolitical events and significant changes to the global economic and financial environment, such as re-emerging inflation, component shortages, energy market uncertainties and the sudden rise in interest rates. All these events have led to a focus among enterprises on their global supply chain structures and operating risk management policies.

PRESS RELEASE

In such a challenging 2022, SIT further committed to its sustainable growth strategies, balancing short-term volatility with its innovation goals and supporting customers seeking energy efficiency and emission-cutting solutions. Major investment has therefore been deployed in R&D and for new laboratories, while we have sought to establish high-value partnerships and synergies in areas such as new smart water meters and controlled mechanical ventilation applications.

2023 also began amid a cloud of uncertainty and to which we bring the same vision and ability to adapt to changing scenarios, confident of the leading role that SIT will play in managing the energy transition towards sustainable development”.

The safety procurement strategies occurred in 2022 in the Heating market supply chains resulted in high inventory levels, whose destocking timing cannot be predicted at the moment

Geographically, expectations in some areas are positive while uncertainty remains in the markets directly and indirectly affected by the Russia/Ukraine conflict

During the year, the planned production footprint will become fully operational from which an improvement in performances are expected, with greater contribution of the Tunisian plant

SIT fundamentals are positive given the proactive role in the opportunities provided by the energy transition
